

KOHLER AI Studio — AI Bathroom Designer & Planner

Sai Kaushik Tatineni | KOHLER-MITWPU AI Research Lab

From budget and dimensions to a complete bathroom blueprint, instantly.
A product-first prototype that converts free-text direction into tiered, costed layouts and an interactive 3D planning viewport.

Problem — Why professionals and consumers struggle

Selecting fixtures under a strict budget is time-consuming and error-prone: thousands of SKUs, unclear fit for a given footprint, and no single tool that balances aesthetics, cost, and spatial constraints in real time.

Solution — What KOHLER AI Studio delivers

Instant, tiered recommendations

Value, Balanced, and Premium packages with line-item pricing and SKU links.

Style-aware AI chat

Free-text parsing: "cozy modern, budget \$3k" → curated designs and materials.

Interactive 3D viewport

Zoom, rotate, and simulate sightlines to verify fit and proportions before purchase.

Core Capabilities — UX and product mechanics

Key Features

- Multi-tier recommendation engine (Value / Balanced / Premium) with configurable tradeoffs
- Catalog filters: dimensions, finish, sustainability rating, lead time
- Live cost roll-up with per-SKU and BOM export (CSV / ERP-ready)
- Interactive edits: swap fixtures, update budget, reflow layout instantly

Interaction Flow

Designed for rapid iteration — prototype
→ validate → handoff.

Kohler Alignment & Strategic Next Steps

1

1. Sustainability-first catalog

Eco Water-Saver products and low-impact materials are prioritized in scoring and recommendations to align with KOHLER sustainability goals.

2

2. API & live integration

Integrate real-time AI models (OpenAI/Gemini) and KOHLER inventory APIs for up-to-date pricing, availability, and lead times.

3

3. Scale to adjacent spaces

Expand the product taxonomy to kitchens and light commercial programs; reuse the core planner and UI patterns.

4

4. AR mobile viewport

Bring plans to life on-site with AR placement and measurement verification to shorten decision cycles and reduce returns.

Recommended next step: pilot integration with live pricing and a Kohler product subset. Timeline: 90-day prototype to pilot.
Deliverables: working API hooks, 3 example room types, and AR proof-of-concept for mobile devices.
